

2016 Survey Summary for Storage in Professional Media and Entertainment

Thomas Coughlin
Coughlin Associates
www.tomcoughlin.com

Introduction

Digital storage plays a significant role in the professional media and entertainment industry. Digital storage for the M&E industry has demand characteristics often very different from typical IT storage because of the performance requirements of real-time video in capture, editing and post-production as well as distribution. On the other hand, the ever growing archive of long-tail digital content and increasing digitized historical analog content is swelling the demand for cold as well as warm archives using tape, optical discs and hard drive arrays.

In February through June of 2016, Coughlin Associates, Inc. conducted a survey of professional media and entertainment professionals on various digital storage topics. The survey was broken down into several segments: content capture, editing and post-production, content delivery as well as archiving and digital preservation. The Society of Motion Picture and Television Engineers (SMPTE), Digital Production Buzz, European Broadcast Union, Post Magazine, Postperspective.com and other organizations assisted by soliciting survey participants. Digital Production Buzz helped with the 2012, 2013, 2014, 2015 and 2016 surveys and that group represents many smaller facilities. As a result, these surveys include a greater number of smaller facilities than earlier Coughlin Associates surveys.

Coughlin Associates wished to conduct the survey in order to discover new trends for storage in the industry and improve the accuracy of the company's annual report on digital storage for the media and entertainment industry. This summary contains some of the results from that survey and where appropriate we will compare the 2016 results from those of a similar survey in March to May 2013, 2014 and 2015; May and June of 2012; February, November and December of 2010 and March of 2009.

Of the 167 people that started the survey, 153 completed at least some part of the survey (91.6%). All of the people surveyed worked with professional media and entertainment content. 105 were involved in content capture, 96 were involved in digital editing or post-production, 40 were involved in content distribution and 72 were involved in long term digital archiving or digital preservation.

Table 1 shows the percentage of survey participants in various professional content market segments and **Table 2** show the general locations of the survey participants. Note that the “other” category in Table 1 included responses such as sports, education, social media, games, documentaries, and audio production.

The following sections of this document give some of the results of the survey for each of the major survey sections described above. Note that the results given in this survey are representative of the full data but they are often a simplification of the more complex survey results. The full survey, including a more complete analysis of the survey results as well as some multi-factor dependencies is available from Coughlin Associates as part of the 2016 Digital Storage in Media and Entertainment report (www.tomcoughlin.com/techpapers.htm).

Table 1. Percentage of survey participants in content market segments.

TV Episodics	36.2%
TV Other	39.2%
Feature Film	33.8%
Short Features, Commercials and Trailers	40.8%
Corporate or Government Video	42.3%
Web Casts	22.3%
Games	6.2%
Other (please specify)	13.8%

Table 2. Survey participant locations.

US or Canada	69.8%
Mexico or Latin America	3.9%
Europe	19.4%
Africa	0.0%
Japan or Korea	2.3%
China or Rest of Asia	0.8%
Australia	3.9%
Antartica	0.0%

Content Capture

Professional video cameras are undergoing rapid evolution, driven by higher resolution content as well as multi-camera content capture, including stereoscopic virtual reality content capture. In addition, the physical storage media for professional cameras is undergoing rapid evolution as film and magnetic digital tape is impacted by the rapid file access convenience of hard disk drives, optical discs, and the ruggedness of flash-based solid-state storage.

Figure 1 shows the percentage of various recording media used by the 2016 survey recipients in professional video cameras.

Figure 1. Percentage of various recording media in professional video cameras.

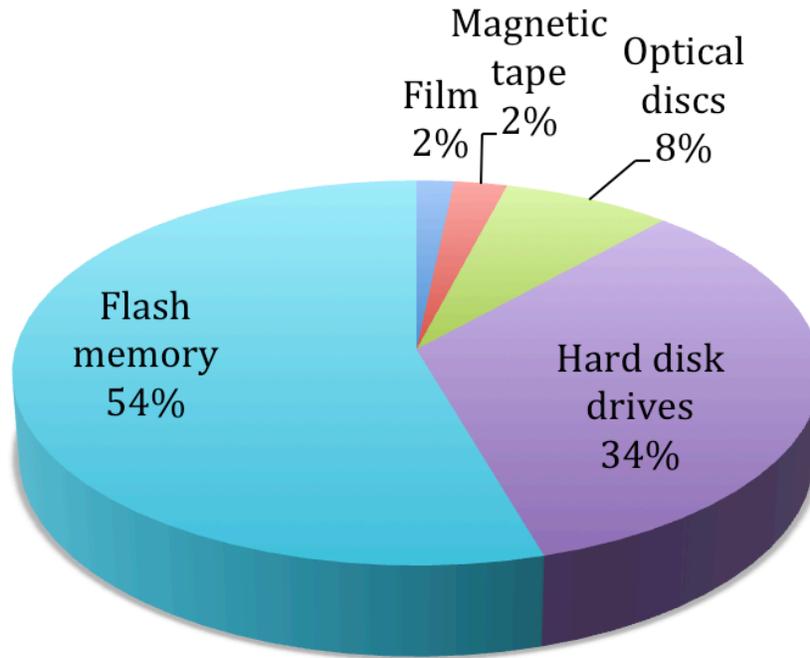

Table 3 compares the results from the 2009, 2010, 2012, 2013, 2014 and 2015 surveys with those from 2016. Flash memory is the clear leader in professional video camera media, increasing from 19% in 2009 to 66% in 2015 and 54% in 2016 while magnetic tape show a consistent decline over the same period, in particular, magnetic tape declines from 34% to 2%. Optical discs use between 2009 and 2016 bounced around between 7% and 17%. Film shows a general decline with 15% usage in 2009 to 2% in 2016. The trend with declining film use follows the trend towards completely digital workflows.

Table 3. Comparison of Professional Video Camera Media Trends

Year	Magnetic Tape	HDD	Optical	Flash Memory	Film
2009	34%	23%	9%	19%	15%
2010	25%	22%	17%	28%	8%
2012	20%	22%	12%	44%	2%
2013	15%	18%	7%	59%	1%
2014	7%	24%	10%	57%	2%
2015	4%	21%	8%	66%	1%
2016	2%	34%	8%	54%	2%

Note that about 60% said that they used external storage devices to capture content from their cameras in 2016.

In 2016 93.2% of the survey respondents that participated in this section said they reuse their recording media (compared to 89.9% in 2015, 93.3% in 2014, 84.5% in 2013, 86% in 2012, 79% in 2010 and 75% in 2009). In 2016 75.0% of respondents said they archive their camera recording media (compared to 73.6% in 2015, 74.2% in 2014, 81.4% in 2013, 85% in 2012 and 77% in 2010). Archiving the original recording media may be a practice in decline (especially with expensive reusable media such as flash memory cards). Digital storage on tape, hard disk drives or flash storage allows reuse of media.

In the professional Media and Entertainment Survey we asked how much of the participants content was born digital and got the responses shown in **Table 4**. We included responses for the same ranges from the 2015, 2014, 2013, 2012 and 2010 survey. In 2016 83.0% said that over 80% of their content is created in a digital format vs. 85.3% in 2015, 81.1% in 2014, 75% in 2013, 80% in 2012 and 63% in the 2010 survey.

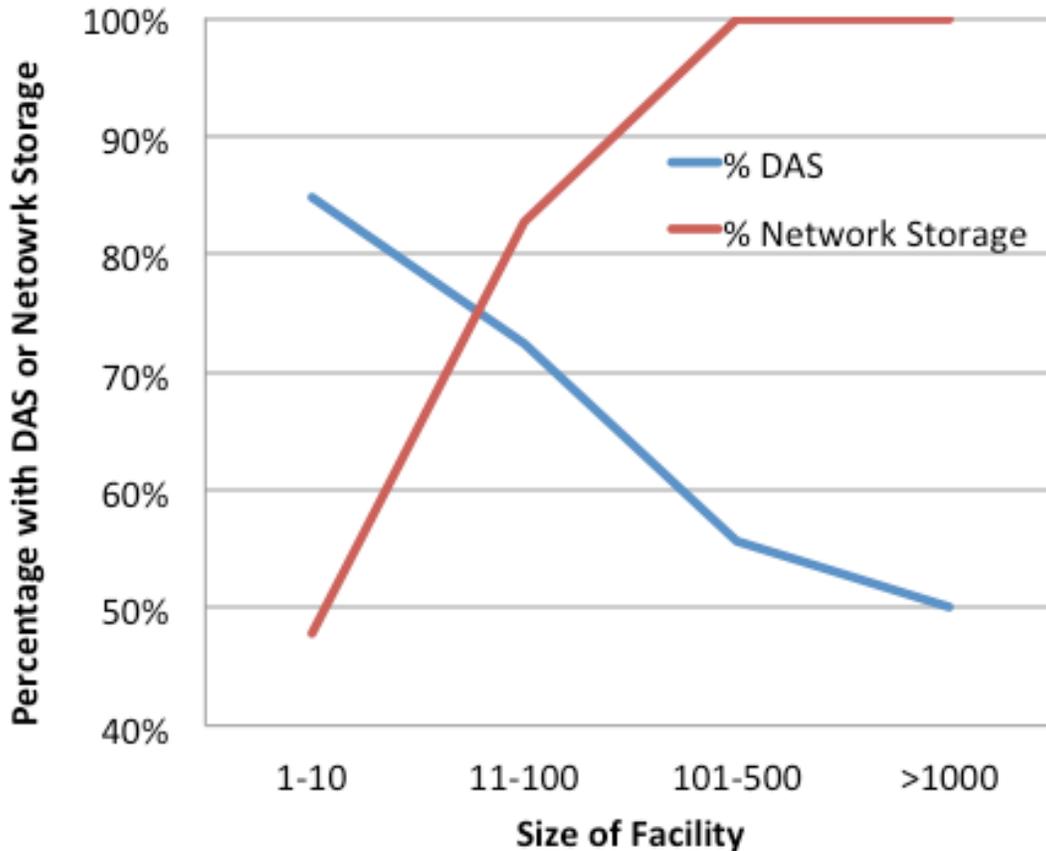

Table 4. Survey Question: What % of your Content is Born Digital

Percent Born Digital	2010	2012	2013	2014	2015	2016
<10%	3.9%	0.9%	1.1%	0.0%	0.0%	0.0%
11% to 20%	1.3%	0.4%	0.0%	1.1%	1.6%	3.4%
21% to 30%	3.2%	0.0%	0.0%	1.1%	1.6%	3.4%
31% to 40%	3.2%	2.6%	1.1%	2.1%	1.6%	0.0%
41% to 50%	5.2%	2.2%	3.3%	2.1%	0.8%	1.1%
51% to 60%	5.2%	1.7%	2.2%	1.1%	1.6%	3.4%
61% to 70%	5.8%	3.1%	6.5%	4.2%	1.6%	1.1%
71% to 80%	8.4%	8.3%	10.9%	7.4%	5.7%	4.5%
81% to 90%	16.1%	10.9%	15.2%	15.8%	7.3%	14.8%
91% to 100%	47.7%	69.9%	59.8%	65.3%	78.0%	68.2%

Digital Editing and Post Production

Figure 2 shows that for the 2016 survey participants there were a general increase in the use of shared network storage (such as SAN or NAS), and a decrease in DAS storage as the number of people working in a post-production facility increases. The DAS storage in the larger facilities may be different than that used in smaller facilities.

Figure 2. DAS vs. Shared Storage and Number of People in a Post Facility

When participants were asked about their use of direct attached and network storage in digital editing and post-production, the survey showed the following summary statistics in 2016 (compared to earlier surveys):

- 74.5% had DAS (compared to 85.1% in 2015, 87.7% in 2014, 87.3% in 2013, 92% in 2012, 91% in 2009 and 83.8% in 2010)
 - 89.8% of these had more than 1 TB of DAS (compared to 89.1% in 2015, 86.5% in 2014, 88% in 2013, 78% in 2012, 96% in 2010 and 52% in 2009)
 - 10 to 50 TB was the most popular DAS size (27.5%)
 - 17.4% of these had more than 50 TB of DAS storage (compared to 18.5% in 2015, 22.3% in 2014 and 18.3% in 2013)
 - 2.9% had more than 500 TB of DAS storage (this was 8.4% in 2015, 6.9% in 2014 and 7% in 2013)
- 68.1% had NAS or SAN (compared to 68.6% in 2015, 75.0% in 2014, 70.9% in 2013, 53.8% in 2012, 81% in 2010 and 2009—probably due to the addition of many smaller post-production facilities in the later surveys, (44.6%, 52.9%, 49.6%, 53.4% and 67% were in 1-10 people facilities in 2016, 2015, 2014, 2013 and 2012 respectively (compared to about 26% in 2010)

- 57.4% had 50 TB or more of network storage in 2016 (compared to 52.1% in 2015, 49.4% in 2014 and 57.8% in 2013)
- About 15% had more than 500 TB of NAS/SAN storage in 2016 (this was 17% in 2015, 11% in 2013 and 2014)
- In 2012 about 48% had more than 16 TB of NAS or SAN (compared to 44% in 2009 and 58% in 2010)
- Many survey participants had considerable storage capacities in both DAS and NAS/SAN.

In the 2012, 2013, 2014, 2015 and 2016 surveys we asked whether survey participants used cloud-based storage for editing and post-production. In 2016 23.0% of responding participants said yes versus 30.2% in 2015, 25.6% in 2014, 24.7% in 2013 and 15.1% in 2012. In 2016 20.9% of the respondents said that they had 1 TB or more storage capacity in the cloud vs. 32.9% in 2015, 28.1% in 2014, 23% in 2013 and 26.7% in 2012. It is interesting that the 2016 results seem to show less use of cloud storage than in prior years.

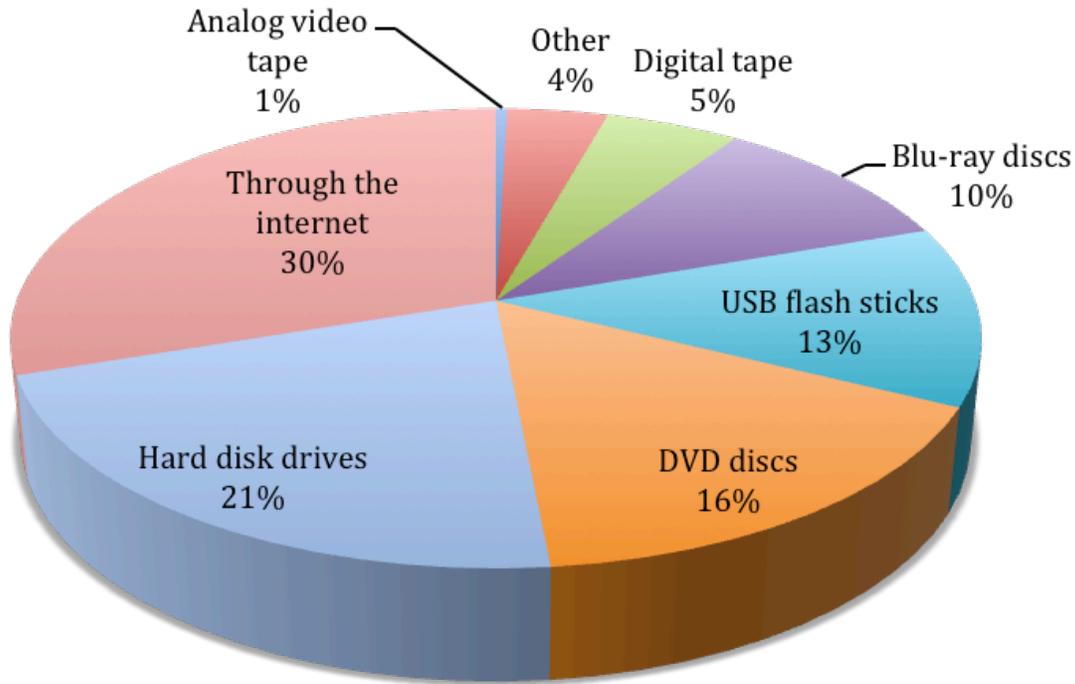

Table 5 compared the 2009, 2010, 2012, 2013 2014, 2015 and 2016 survey results for distribution media used for proxies or completed editing work. Note that in the 2016, 2015, 2014, 2013 and 2012 surveys we added proxy distribution through the Internet as a response option. In 2014, 2015 and 2016 we included USB Flash Sticks. Analog and digital tape showed a relative decline over the years. There is a long-term trend for declining use of optical discs. HDDs were about the same as prior years. USB sticks have been the same percentage from 2014-2016. Internet distribution was 30% in 2016, 29% in 2015, 27% in 2014 and 2013 and 29% in 2012. Internet distribution appears to be the dominant method for proxy distribution today (followed by HDDs).

Table 5. Proxy Distribution Media Trends

	2009	2010	2012	2013	2014	2015	2016
Other	11%	17%	5%	5%	5%	4%	4%
Analog video tape	10%	6%	2%	2%	1%	2%	1%
Blu-ray discs	9%	11%	10%	12%	11%	8%	10%
Digital tape	24%	18%	11%	11%	8%	7%	5%
Hard disk drives	24%	25%	19%	22%	18%	20%	21%
DVD discs	23%	23%	24%	21%	17%	17%	16%
USB Flash Sticks					13%	13%	13%
Through internet	NA	NA	29%	27%	27%	29%	30%

Figure 3 is a pie chart of the 2016 survey proxy distribution media results.

Figure 3. Distribution format for proxies or completed work.

Content Distribution

Distribution of professional video content has many channels. It can use physical media for getting content to digital cinemas or to consumers or it can be done electronically using broadcast, cable or satellite transmission; or through the internet or mobile phone networks. **Table 6** gives responses for the percentage of physical media used by the survey respondents for content distribution in 2016, 2015, 2014, 2013, 2012 and 2010 (for the 27, 36, 35, 29, 82 and 62 respondents that used physical content distribution media in 2016, 2015, 2014, 2013, 2012 and 2010 respectively). Note that these are the average for the survey population giving their percentage for each physical media and do not and should not be expected to add to 100%. Digital Tape, DVD discs, HDDs, and Flash Memory are the most popular distribution formats.

Table 6. Average Percentage content on physical media for professional content distribution

Media	2010	2012	2013	2014	2015	2016
Digital tape	59%	34%	32%	20%	9%	33%
CD or VCD discs	13%	18%	23%	4%	6%	19%
DVD discs	48%	79%	67%	51%	63%	36%
Blu-ray discs	18%	24%	10%	21%	18%	12%
Hard disk drives	45%	51%	55%	52%	62%	64%
Flash memory or SSDs	25%	24%	22%	28%	24%	26%

Following are survey observations for electronic content distribution (such as video on demand).

- Average hours on central content delivery system was about 2,174 hours in 2016. In 2015 this was 4,182 hours, in 2014 this was 1,142 hours, in 2013 and in 2012 this was 2,275 and 1,894 hours respectively. It was 700 hours in 2010 and 200 hours in 2009).
- There was an average of 427 hours ingested monthly in 2016 (this was 492 hours in 2015, 688 hours in 2014, 837 hours in 2013, 500 hours in 2012, 200 hours in 2010 and 150 hours in 2009). The 2013 and 2014 data is skewed high by some very high survey participants.
- In 2016 38% of respondents had more than 5% of their content on edge servers (this compares to about 43% in 2015 and 2014, 42% in 2013 and 24% in 2012)
- About 31% used flash memory on their edge servers in 2016 (this was 20% in 2015, 21% in 2014, 12% in 2013, 14% in 2012, 16% in 2010 and 20% in 2009)

High-speed enterprise solid-state drives (SSDs) and other solid-state storage technology for edge content delivery appeared to be in decline from 2009 through 2013 but they seem to have recovered from 2014 through 2016.

Digital Archiving and Preservation

Today most new entertainment and media content is born digital and it is natural that this content should be preserved in digital form. This requirement places new demands on format preservation for long-term digital archives as well as management and systematic format refreshes during the expected life of a digital archive. In addition, the cost of analog content digitization and preservation in a digital format has gone down considerably and many digitization projects are proceeding apace. The growth of digital content archiving will swell the amount of content available for repurposing and long tail distribution. It will also swell the amount of storage and storage facilities required to store these long-term professional content archives.

Following are some observations from the professional media and entertainment survey on trends in digital archiving and content preservation. The ease of capturing and storing digital content has encouraged many facilities and organizations to store more of their raw captured content and even copies of all their distribution formats.

Detailed results from the 2016 survey are compared to the 2015, 2014, 2013, 2012, 2010 and 2009 surveys.

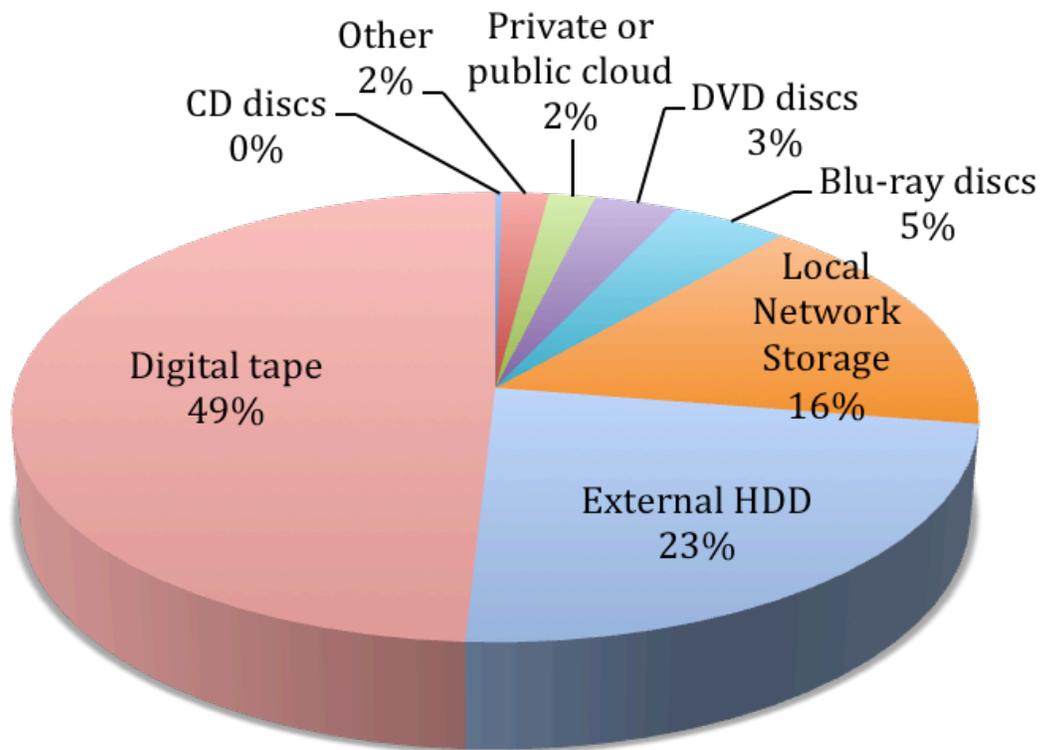

- 41% had >2,000 hours of content in a long term archive in 2016 (compared to 34% in 2015, 41.9% in 2014, 43.8% in 2013 and 18% in 2012—note that there were a large number of smaller survey participants in 2012. This was 52% in 2010 and 44% in 2009,
- 56.9% archived all the content captured from their cameras in 2016 (this was 57.6% in 2015, 46.5% in 2014, 48.6% in 2013, 63% in 2012, 34% in 2010 and 40% in 2009)
- 54.0% archived copies of content in all of their distribution formats in 2016 (this was 62.6% in 2015, 69.4% in 2014, 56.9% in 2013, 71% in 2012, 57% in 2010 and 55% in 2009)
- 35.9% digitally archived all content captured from their dailies in 2016 (this was 46.2% in 2015, 44.3% in 2014, 37.7% in 2013, 40% in 2012 and 24% in 2010)
- 31.3% digitally archived all content captured from rough cuts in 2016 (this was 37.8% in 2015, 40.8% in 2014, 46.6% in 2013, 46% in 2012, and 23% in 2010)
- 36.5% digitally archived all content captured from their intermediaries in 2016 (this was 37.4% in 2015, 38.6% in 2014, 46.3% in 2013, 8% in 2012 and 30% in 2010)
- 50.9% of the respondents said that their annual archive growth rate was >6% in 2016 (this was 47.9% in 2015, 67.3% in 2014 and 65.3% in 2013).
- 31.3% added 1,000 hours or greater to their archive annually in 2016 compared to 26.9% in 2015, 35.1 % in 2014, 34.4% in 2013, 9.3% in 2012 and 39% in 2010. (The 2012 results was probably due to the inclusion of many smaller producers)
- About 28.6% had >2,000 hours of unconverted analog content in 2016 (compared to 32.6% in 2015, 33.3% in 2014, 24.2% in 2013, 18% in 2012, 54% in 2010 and 48% in 2009)
- In 2016 16.7% of participants had over 5,000 hours of unconverted analog content (this was 16.3% in 2015, 14.3% in 2014 and 3% in 2013)
- In 2016 about 52.5% of the survey respondents have an annual analog conversion rate of 2% or less (compared to 42.8% in 2015, 21.5% in 2014, 27% in 2013 and 56% in 2012)
- The average rate of conversion is about 3.4% in 2016 (this was 4.5% in 2015, 5.5% in 2014 and 5.4% in 2013). This is within the general range observed in 2012, 2010 and 2009)

Professional media and entertainment content was traditionally archived on film or analog videotapes. Today the options available for archive media to store digital content depend upon the preferences and existing infrastructure of digital archive facilities. **Figure 6** gives the percentage distribution of archive media used by the survey participants.

Among the survey participants Digital Tape was the most common storage media 49% in 2016 compared to 40% in 2015 and 2014, 43% in 2013, 23% in 2012, 36% in 2010 and 33% in 2009). External Hard Disk Drives are the next most

common at 23% in 2016 and 28% in 2015, 18% in 2014 (the similar category in earlier years was labeled Hard Drives and was 31% in 2013, 28% in 2012, 24% in 2010 and 25% in 2009). Disk Local Storage Networks were the next most common at 16% in 2016 and 2015 (this was 21% in 2014, 8% in 2013 and 12% in 2012). Optical discs of all sorts were about 8% in 2016 (compared to 6% in 2015, 12% in 2014, 8% in 2013, 28% in 2012, 21% in 2010 and 23% in 2009). For the 2016, 2015, 2014, 2013 and 2012 surveys we added archiving in a private or public cloud and found that 2% used a public cloud in 2016 while in 2015 this was 5%, it was 4% in 2014 and 2013 (and 5% in 2012. For the “other” category we had 2% in 2016 and 5% in 2015 and 2014 (compared to 6% in 2013, 4% in 2012, 19% in 2010 and 18% in 2009).

Figure 6. Percentage of Digital Long-Term Archives on Various Media

We are guessing that in the earlier surveys archiving on local or remote network storage was a significant part of the “other” archive methods. Presumably many of the HDDs used for archiving are in arrays for warm (near-line) archives and that storage in a local network or in the cloud is likely on hard disk drives as well (making likely HDD archiving about 41% of the total, note though that there are now LTO tape-based cloud storage systems using tape so the HDD number could be a bit lower). These numbers are abstracted from the actual response distribution since many facilities may use one or more archive storage media.

Table 7 gives the average projected growth rate for these archive storage media based upon the 2016, 2015, 2014, 2013, 2012, 2010 and 2009 surveys. This data is a simplification of the complete results from the survey.

The growth rate of digital tape is less than that of hard disk drives if we include external HDDs and local network storage. Hard disk drives, either in local storage systems and devices or through network and remote storage appears to be getting a significant growth spurt. Note though that there are LTO tape based cloud archives now being introduced to the market, so actual cloud archive storage will likely be split between tape and HDDs. It is also clear from the survey that there is a segment of this market that will continue to rely on optical media for digital archives.

Table 7. Simplified percentage growth rate of various archival media types.

	2016	2015	2014	2013	2012	2010	2009
Digital Tape	66.7%	59.2%	57.7%	64.5%	56.8%	76.1%	69.2%
CD Discs	21.7%	17.1%	12.5%	12.9%	20.1%	56.6%	63.5%
DVD Discs	28.3%	26.3%	18.8%	21.0%	34.5%	32.7%	32.7%
Blu-ray Discs	28.3%	17.1%	15.6%	16.1%	26.6%	26.5%	25.0%
Hard Disk Drives				48.4%	69.8%	21.2%	26.9%
Ext. Hard Disk Drives	50.0%	55.3%	42.4%				
Local Network Storage	43.3%	35.5%	39.1%	29.0%	24.5%		
A Private or Public Cloud	28.3%	30.3%	23.4%	19.4%	17.3%		
Other	16.7%	14.5%	12.5%	9.7%	12.2%	19.5%	27.9%

Some other observations from the archive and preservation section of the survey:

- About 42.6% never update their digital archives in 2016 (compared to 46.4% in 2015, 25.4% in 2014, 42.4% in 2013, 44% in 2012, 39% in 2010 and 41% in 2009)
- About 76.2% used different storage for archiving and working storage in 2016 (this was 77.4% in 2015, 77.9% in 2014, 81.8% in 2013, 71% in 2012, 77% in 2010 and 75% in 2009)
- About 49.2% copied and replaced their digital long term archives every 10 years or less in 2016 (this was 45.2% in 2015, 67% in 2014, 47% in 2013, 50% in 2012)
- 38.1% said they would use a private or public cloud for archiving in 2016 while 43% in 2015 and in both 2014 and 2013 40% said that they would use a private or public cloud for archiving content
